

October Push

Julian Bernado

I'm getting serious about trying to wrap up the work for this project by early November. But with the sparseness of my fully-focused sustained attention on a full-time basis, it's been a bit hard keeping it all in my head. I wanted to get everything down in a format that could serve like a textbook for finishing writing all the code and then writing the paper. I want to do it in this format rather than plain notes so that I can have a browsable, densely linked set of notes that may include typeset math or code.
